GMP-Grade Imidazole upgrade your risk assessment

Imidazole is a critical buffer substance for bioprocesses. Its most widely used application is in the preparation of buffer solutions necessary to operate downstream purification columns, packed with our Fractogel®, Eshmuno®, and Prosep® resins.

Switch to the only cGMP-grade* Imidazole available to enhance the purity of your target protein. Our in-house manufactured product provides you with:

- Superior regulatory support with an Emprove® Expert product
- A reagent grade buffer solution that meets the specifications set by the American Chemical Society
- The option to order a sample kit from 3 different batches

All of our cGMP-grade Imidazole is manufactured in Europe and is subject to robust QC specifications. You also have the flexibility of choosing from a variety of different pack sizes based on your individual needs.

Products from our Emprove® Expert portfolio are designed for higher risk applications with low bioburden and endotoxins. We offer well-characterized impurity profiles of the manufacturing process, including the packaging materials, and boast an excellent track record of customer and FDA-audits – making us your preferred global partner for top-quality buffer substances.

*based on IPEC - PQG GMP Guide for pharmaceutical excipients 2006
